The present invention relates to the isolation of a novel human G-protein coupled receptor (GPCR) which is related to the chemokine receptor subfamily. The cDNA and gene sequences encoding for GPCR are also given in the invention. The sequences encoding for GPCR are also given in the invention. The sequences of the invention are useful for diagnosing and treating diseases or conditions mediated by human proteases. Such diseases include hyperproliferative disorders

CR (e.g. hyperplasia), meurological disorders (e.g. parkinson's disease), sychiatric diseases (e.g. schizophrenia), inflammatory disorders (e.g. adult respiratory disorders a modulator of the expression of the protein. It also serves as a target for identifying agents for use in mammalian therapeutic applications, e.g. a human drug, particularly modulating a biological or pathological assays related to GPCRs that are related to members of the chemokine receptor subfamily, in drug screening assays and in competition binding assays. GPCR is also greening assays and in competition binding assays. GPCR is also greening assays or predisposition to
                                                                                                                                                                                                                                                                                                                                                         Human, G-protein coupled receptor; GPCR; chemokine receptor; protease;

The sequence represents a human G-protein coupled receptor (GPCR), hRUP19. The endogenous and non-endogenous, constitutively activated versions of human G-protein coupled receptors (GPCR), are useful for direct identification of candidate compounds as receptor agonists, inverse agonists or partial agonists having applicability as therapeutic agents for treating diseases related to GPCR, e.g. lung cancer. Non-endogenous version of human GPCRs are also utilized in research settings and in vitro and in vivo system, incorporating GPCRs can be utilised to elucidate and understand the roles these receptors play in the human condition, both normal and diseased.
                                                                                             Endogenous and non-endogenous versions of human G-protein coupled receptors for direct identification of candidate compounds as agonists, inverse agonists or partial agonists for use as therapeutic agents -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               signal transduction; schlzophrenia; thyroid disorder; renal failure; rheumatoid arthritis; CNS disorder; infection; metabolic disease; cardiovascular disease; proliferative disorder; hormonal disorder; neurological disorder; neuronal disorder; Alzheimer's disease; cancer; attention deficit hyperactivity disorder/attention deficit disorder; parkinson's disease; migraine; senile dementia; inflammatory disease; rheumatoid arthritis; autoimmune disorder; respiratory ailment;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to novel G protein-coupled receptors (nGPCRx; where x is 1, 3, 4, 5, 9, 11, 12, 14-18, 20, 21, 22, 24, 27, 28, 31-38, 40, 41, 55-60) and their coding sequences. The present sequence is one such G protein-coupled receptor. GPCRs are also known as seven transmembrane receptors and function in signal transduction. The GPCRx coding sequences are useful for screening a human to diagnose a discorder affecting the brain or a genetic predisposition. The schizophrenia. nGPCRx are useful for identifying compounds useful for treating schizophrenia. Detection of nGPCRx in a sample is useful as a diagnostic tool for diseases or discorders e.g. thyroid disorders, renal failure, rheumatoid arthritis, CNS disorders, infections such as HIV-1, metabolic and cardiovascular diseases, proliferative disorders and for treating neurological disorders, including schizophrenia, ADHDADD (attention deficit-hyperactivity disorder/attention deficit disorder), and neuronal disorders such as Alzheimer's disease, Parkinson's disease, and neuronal disorders such as Alzheimer's disease, Parkinson's disease, and neuronal disorders such as Alzheimer's disease, Parkinson's disease, conditions (e.g. Crohn's disease), rheumatoid arthritis, autoimmune disorders, respiratory aliments such as asthma, and inflammatory

Additional disorders include inflammatory conditions (e.g. Crohn's disease), rheumatcid arthritis, autoimmune disorders, cancers, respiratory ailments such as asthma, and inflammatory diseases e.g. inflammatory bowel disease.
                                                                                                                                                   The present invention relates to novel G protein-coupled receptors (nGPCRx; where x is 1, 3, 4, 5, 9, 11, 12, 14-18, 20, 21, 22, 24, 27, 28, 31-38, 40, 41, 53-60) and their coding sequences. The present sequence is one such G protein-coupled receptor. GPCRs are also known as seven transmembrane receptors and function in signal transduction. The nGPCRx coding sequences are useful for screening a human to diagnose a disorder affecting the brain or a genetic predisposition, specifically schizophrenia. nGPCRx are useful for identifying compounds useful for treating schizophrenia. Detection of nGPCRx in a sample is useful as a diagnosit tool for diseases or disorders e.g. thyroid disorders, renal failure, rheumatoid arthritis, CRS disorders, infections such as HIV-1, metabolic and cardiovascular diseases, proliferative disorders and hormonal disorders. Modulators of nGPCRx activity have the utility for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; GCPR; G-coupled protein-receptor; cardiant; antiarteriosclerotic; anabolic; cytostatic; antiviral; gene therapy; cardiomyopathy; obesity; anotexia; diabetes; osteoporosis; Crohn's disease; multiple sclerosis; asthma: Alzheimer's disease; Parkinson's discrder; Huntington's disease; infection; human immunodeficiency virus; HIV.

The invention relates to nucleic acid sequences (ABAB1529-BBAB152) that encode G-coupled protein-receptor related polypeptides (ABB4452-ABB4443). The isolated polypeptide having a sequence differing by no more than 15 % of amino acid residues from one of 22 amino acid sequences (or mature forms of the sequences), fully defined in the sequences (or mature forms of the sequences), fully defined in the complex receptor X (GPCRX) polypeptides. The polypeptides have potential cardiant, antiarteriosclerotic, anabolic, cytostatic and antiviral activity. The colypeptides can be administered therapeutically, especially, using gene therapy and expressing the encoding DNA in vivo, to treat or prevent CG GPCRX-associated disorders, especially in humans. For example, they can certact/prevent cardiomyopathy, atherosclerosis, disorders celated to signal processing and metabolic pathway modulation (e.g. obesity, anorexia), diabetes, osteoporosis, Crohn's disease, multiple CG sclerosis, asthma, cancers, neurodegenerative disorders, disease, Parkinson's disorder, Huntington's disease), immune disorders, cancers, neurodegenerative disorders, cancers, in the colomental disease), immune disorders, contential, fungal, protozoal and viral infections (e.g. with human in the presence of or predisposition to a disease associated contential and predisposition to a disease associated contential and predisposition or a disease associated and contential and predisposition or an encoderation of an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              detecting alterations in polypeptide expression levels relative to control samples. They are useful to identify agents binding polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New human G-protein coupled receptor X, GPCRX, polypeptide useful in treatment or prevention of GPCRX associated disorders e.g. cardiomyopathy or atherosclerosis, and to screen for antagonists and agonists useful therapeutically
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (e.g. cellular receptors or downstream effectors) and/or agents modulating cellular polypeptide expression or activity, useful as antagonists and agonists in disease treatment.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is a member of the G-protein coupled receptor. (7TM receptor) family, designated the HW14A receptor. The proteins, agonists, antagonists and polynucleotides can be used for treating disorders associated with increased or reduced expression or activity of HW14A, e.g. bacterial, fungal, protozoan and viral infections, of HM14A, e.g. bacterial, fungal, protozoan and viral infections, diabetes, obesity, anorexia, bullmia, asthma, Parkinson's disease, acute heart fallure, hypotension, hypertension, urinary retention, osteoporosis, angina pectoris, myocatala infarction, stroke, ulcers, asthma, allergies, benign prostatic hypertrophy, migraine, vomiting, psychotic and neurological disorders, including anxiety, schizophrenia,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      HM74A receptor; G-protein coupled receptor; infection; pain; cancer; diabetes; obesity; neurological disorder; heart failure; hypertension; asthma; allergy.

The sequence represents a human G-protein coupled receptor (GPCR), hRUP25. The endogenous and non-endogenous, constitutively activated versions of human G-protein coupled receptors (GPCR), are useful for direct identification of candidate compounds as receptor agonists, inverse agonists or partial agonists having applicability as therapeutic agents for treating diseases related to GPCR, e.g., lung cancer. Non-endogenous version of human GPCRs are also utilized in research settings and in vitro and in vivo system, incorporating GPCRs can be utilised to elucidate and understand the roles these receptors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Endogenous and non-endogenous versions of human G-protein coupled receptors for direct identification of candidate compounds as agonists, inverse agonists or partial agonists for use as therapeutic agents -

The mutant proteins of the invention contain a mutation in a portion of the protein comprising intracellular loop 3 (IC3) and transmembrane domain 6 (TM6). A non-endogenous amino acid, X, is substituted for an endogenous residue in IC3 at a position 16 amino acids N-terminal of an endogenous proline in TM6 to form a sequence X-(AA)15-Pro. The endogenous amino acid is selected from Lys, His, Arg or Ala, and is preferably Lys. When the endogenous residue at this position is Lys, this residue is replaced by His, Arg or preferably Ala. The 15 amino acid stretch between the substituted amino acid attention and the Protein and Lys and Ly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                treating diseases and disorders associated with that receptor. Because the novel mutant GPCRs are constitutively active, they can be used directly for screening of compounds without the need for endogenous ligands. The present sequence represents a human wild-type GPCR referred to in an exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       may be endogenous, non-endogenous, or a mixture of endogenous and non-endogenous residues. The constitutively active GPCRs are useful for identifying antigonists, agonists and partial agonists for use as pharmaceutical agents. The mutant proteins are also useful in research settings for elucidating the roles of the receptors in normal and diseased conditions. Antagonists for a particular GPCR are useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to constitutively active, non-endogenous versions
                                                                                                                                                                   Gaps

AAY90673 and AAY90683-Y90687), and to DNA encoding them (AAA3079-A30743) and AAA30775-A30779). The mutant protein coupled receptors (GPCRS, AAY90643-A4A30775-A30779). The mutant proteins of the invention contain a mutation in a portion of the protein comprising intracellular loop 3 (IC3) and transmembrane domain 6 (TM6). A non-endogenous amino acid, X, is substituted for an endogenous residue in IC3 at a position 16 amino cids N-terminal of an endogenous proline in TM6 to form a sequence X-(AA)15-Pro. The endogenous amino acid is selected from Lys, His, Arg or Ala, and is preferably Lys. When the endogenous residue at this position is Lys, this residue is replaced by His, Arg or preferably Ala. The 15 amino acid stretch between the substituted amino acid and the Pro may be endogenous residues or a mixture of endogenous and non-endogenous residues. The constitutively active GPCRs are useful for identifying antagonists, agonists and partial agonists for use as pharmaceutical agents. The mutant proteins are also useful in research settings for elucidating the roles of the receptors in normal and diseases and disorders associated with that receptor. Because the novel mutant GPCRs are constitutively acitive, they can be used directly for screening of compounds without the need for endogenous ligands. Sequences AAY90643-AAY90687 and AAY90687 the mutant

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence represents a human P2Y-11ke 7 transmembrane receptor, designated AXOR17 polypeptides and polynucleotides can be used in therapy, used to identify compounds, including agonists and antagonists of AXOR17, to diagnose diseases associated with inappropriate contagonists of AXOR17, to diagnose diseases associated with inappropriate AXOR17 levels or activity and used to produce expression systems and compounds that cells for producing AXOR17 polypeptide and polynucleotides can be used to treat bacterial, fungal, protozoan and viral infections, pain, cancer, diabetes, obesity, anorexia, bulimia, asthma, Parkinson's disease, acute heart failure, hypertension, hypotension, urinary retention, osteoporosis, angina pectoris, stroke, myocardial infarction, ulcers, benjam prostatic hypertrophy, migraine, vomiting, psychotic and neurological disorders including schizophrenia and depression and dyskinesias e.g. Huntington's disease or Gilles de la Tourette's syndrome. Antibodies to AXOR17 can also be used to treat these diseases. They can also be used in vaccines.
                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                               urinary retention; osteoporosis; angina pectoris; myocardial infarction; ulcer; benign prostatic hypertroppy; migraine; vomiting; schizophrenia; psychotic disorder; neurological disorder; depression; dyskinesia; Huntington's disease; Gilles de la Tourette's syndrome; vaccine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated AXOR17 polypeptide is useful for diagnosis and treatment of microbial infections and diseases e.g. cancer, schizophrenia, diabetes, obesity, stroke and myocardial infarction -

The present amino acid sequence is the hARE-4, an endogenous human orphan G protein-coupled receptor (GPCR). The full length CDNA was cloned by PCR using hARE-4 specific primers and human genomic DNA as template. The orphan GPCR of the invention, 11ke all GPCRs has seven transmembrane alpha helices with an extracellular N-terminus and an intracellular C-terminus However, no endogenous ligands has yet been identified for the proteins of the invention. The orphan GPCRs may be used in the identification of their endogenous ligands, and to screen potential GPCR
                                                                                                                                                                                         Human; orphan G protein-coupled receptor; GPCR; hARE-4; drug screening;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel human orphan G protein-coupled receptors and the encoding cDNAs for use in the identification of G protein-coupled receptor agonists -

agonists and antagonists for use as pharmaceutical agents. The proteins may also be used in the study of GPCR-mediated signalling cascades, and to elucidate their precise role in normal and diseased human conditions. Nucleic acid encoding human orphan GPCRs may be used for tissue localisation expression analysis to provide information about their function in healthy and pathological states.

                                                                                                                       The present invention describes transmembrane receptors, preferably human G protein coupled receptors (GPCR), for which the endogenous ligand is unknown (orphan GPCR receptors). More specifically the present invention relates to non-endogenous, constitutively activated versions of a human GPCR. These non-endogenous human GPCRs can be useful for the direct identification of candidate compounds as receptors agonists, inverse agonists or partial agonists for use as pharmaceutical agents. methods of using the GPCR polypeptides and polynucleotides as

```
The present sequence is that of novel human G protein coupled receptor (GPCR) 1534, a protein that participates in signalling pathways and which is expressed in colon, pancreas, tonsil, lymph node, spleen, thymus, adrenal gland, heart and peripheral blood lymphocytes, including erythroblasts and megakaryocytes. The 14618 sequence was deduced from 1534 coNA that was isolated from a spleen cDNA ilbrary. The invention relates to the discovery of novel GPCRS, and the polynucleotides encoding them, as well as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       G-protein coupled receptors and the nucleic acids that encode them useful for treating anemia, neutropenia and/or thrombocytopenia -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to human G protein-coupled receptor (GPCR) and their corresponding DNA molecules. GPCR is also referred as seven transmembrane receptor. G protein-coupled receptor protein is useful for treating neurological disorder, particularly schizophrenia. GPCR protein is also useful for identifying compounds useful for treating other neurological and psychlatric diseases, e.g. depression, anxiety, bipolar disease, affective disorders, attention deficit hyperactivity disorder/attention deficit disorder, partinition deficit disorder, parkinson's disease, migrather and senile dementia. The invention also provides genetic screening procedures that entail analysing a person's genome with respect to GPCR. The vectors are useful for the recombinant production of the GPCR's. The present sequence is human CON217 G protein-coupled receptor (GPCR) protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; G-protein coupled receptor; PFI-004; chromosome 12p13.3; cancer; obesity; diabetes; metabolic disease; neurological disease; inflammation; psychotherapeutic; urogenital disease; tissue repair; dermatology; skin pigmentation; photoageing; osteoporosis; cardiovascular disease; gastrointestinal disease; infection; allergy; respiratory disease; sensory organ disorder; sleep disorder; hair loss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Seven transmembrane receptor polypeptides and polynucleotides, useful for treating neurological or psychiatric disorders, e.g. schizophrenia, as well as for identifying compounds useful for treating schizophrenia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            qq
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This invention relates to a polynucleotide sequence encoding a human G-protein coupled receptor termed PFI-004. The PFI-004 gene is located on human chromosome 12013. Also included in the invention is the PFI-004 amino acid sequence. PFI-004 is similar to neurotensin receptors. The amino acid sequence. PFI-004 is similar to neurotensin receptors. The calther the protein, an anti-PFI-004 antibody or a composition comprising either the protein or antibody are useful in manufacturing a medicament for the treatment of a patient having the need to modulate, antagonise, selectively antagonise, or agonise the polypeptide. A PFI-004 conditions, disorders, or diseases in which PFI-004 activity may be conditioned, and the oreas which can modulate the polypeptide may be used in therapeutic areas which concern aspects of implicated. Antibodies, compounds and compositions which can modulate the polypeptide may be used in therapeutic areas which concern aspects of signal transduction, such as in the treatment of obssity, diabetes and metabolic disease, neurological disease, psychotherapeutics, urogenital disease, inflammation, cancer, tissue repair, dermatology, skin extandition, photoageing, frailty, osteoporosis, cardiovascular disease, gastrointestinal disease, infection, allergy and respiratory disease, sensory organ disease, infection, allergy and respiratory disease, sequence represents the human PFI-004 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; G-protein coupled receptor; ICSR-1; angina pectoris; osteoporosis; morcardial infarction; inflammatory bowel disease; Parkinson's disease; antibacterial; antiviral; antifungal; protozoacide; cytostatic; obesity; human immunodeficiency virus; anti-HTV; pain; Crohn disease; psychotic; ulcerative colitis; acute heart failure; urinary retention; dyskinesia; neurological disorder; mental retardation; anorexia; bulimia; cardiant; antidiabetic; hypertensive; neuroleptic; antimigraine; asthma; cancer; cerebroprotective; tranquiliser; nootropic; anticonvulsant; vaccine; immune response; hypotension; ulcer; chromosome 12p13.3;

The present sequence is human ICSR-1 protein which is a member of G-protein coupled receptor (7 transmembrane receptor) family. This G-protein coupled receptor (7 transmembrane receptor) family. This creeptor is expressed in either human embryonic kingey 293 (HEK 293) cells or adherent dfhr CHO cells. ICSR-1 is useful for treating and diagnosing infections such as bacterial, fungal, protozoan and viral confidences, diabetes, obesity, anorexia, bulimia, asthma, Crohn disease, cancers, diabetes, obesity, anorexia, bulimia, asthma, Crohn disease, cotte heart failure, hypotension, hypertension, urinary retention, costeoporosis, angina pectoris, myocardial infarction, stroke, ulcers, allergies, benign prostatic hypertrophy, migraine, vomiting, psychotic and neurological disorders including anxiety, schizophrenia, manic depression, depression, delirium, dementia and severe mental retardation, and dyskinesias such as Huntington's disease or Gilles dela Tourette's syndrome. ICSR-1 cDNA is useful as diagnostic reagent for detecting containing methods and also in high-throughput screening antagonists of ICSR-1. It is useful in conventional low capacity containing methods and also in high-throughput screening antagonists of It is also useful for identifying membrane bound or soluble creeptors. ICSR-1 is useful for chromosome localisation studies and chromosome localisation studies and chromosome localisation studies and chromosome localisation studies for chromosome localisation studies of the chromosome localisation studies and chromosome localisation studies and chromosome localisation studies and chromosome localisation studies. The human ICSR-1 gene is located on chromosome localisation studies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

The invention also describes the gene for acrosomal protein SP32. The invention also describes and comical that positively or negatively modulate expression of the P2VL1 gene; (2) mRNA transcripts of the P2VL1 gene, including splice variants and isoforms; and mattisera raised against one or more epitopes of the proteins or protein derived or produced from the mRNA, gene or CDNA; (5) antibodies and antisera raised against one or more epitopes of the proteins or against the protein as a whole; (6) expression systems that express the protein of (4); (7) ligand binding studies and screening assays on native or recombinant receptors or cells or cell membranes containing the protein of (4); (8) transgenic animals and knockout animals which express the protein of (4); (8) transgenic animals and knockout animals which express the protein of (4) or its gene or its mRNA (cDNA) and their development and use; 10) sense and antisense oligonuclectides creatment of diseases that are directly or indirectly associated with the protein of (4). The products of the invention can be used for developing containing and technologies and for evaluating existing drugs and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

The present invention relates to human proteins (AAB61608-AAB61617) and their coding sequences (AAF28679-AAF28698). The proteins of the present invention have hydrophobic domains and can be used for the treatment of various immune deficiencies and disorders, such as severe combined immune pulmonary inflammantion, graft-versus-host disease and cutoimmune pulmonary inflammantion, graft-versus-host disease and cutoimmune pulmonary inflammantion, such as asthma and in regulation of allergic reactions and conditions, such as asthma and in regulation of hemmatopoissis or lymphoid cell deficiencies. The proteins may also have utility in compositions used for bone, cartilage, tendon and/or nerve tissue growth or regeneration as well as wound healing and in the creatment of burns. The proteins may be used in the treatment of periodontal disease and in other tooth repair processes. Other uses include treatment of thrombolytic and haemostatic conditions, treatment or trea
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            endoparasite; ectoparasite; invertebrate; insect; neurological disorder; neuromuscular disorder; human; nematode; lobster; locust; mollusc; leech;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           protein-coupled receptor-like receptor; GPCR-like receptor; helminth;
New human proteins with hydrophobic domains, useful for the treatment of immune disorders, tumors, allergic conditions, thrombosis and microbial infection -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Using G-protein-coupled receptor (GPCR)-like receptors to identify
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      G protein-coupled receptor-like (GPCR-like) receptor protein #16.

                                                                              The sequence represents a G protein-coupled receptor-like (GPCR-like) receptor protein. GPCR-like receptors and their associated nucleic acids may be used to identify candidate compounds for their ability to modulate the activity of GPCRs. The sequences therefore are useful for treating and preventing infection by endoparasitic and ectoparasitic invertebrate parasites, especially helminths and insects, and particularly ailments related to aberrant neurological and neuromuscular function.
                                                                                                                                                                                                                                                                                      Gaps
candidate compounds for the treatment and prevention of invertebrate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Reddy R;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               metabolic disorder; obesity; nootropic; protozoacide; virucide.

The present sequence is human G-protein coupled receptor-3 (GCREC-3)

protein. GCREC is useful in somatic or germline gene therapy to correct

a genetic deficiency, to express a conditionally lethal gene product and

to express a protein which affords protection against intracellular

to express a protein which affords protection against intracellular

croper and also for diagnosis of disorders associated with expression

of GCREC. GCREC is also useful for generating hybridisation probes useful

crof GCREC. GCREC is used to diagnose, prevent and treat

thuman diseases GCREC is used to diagnose, prevent and treat

crodel human diseases (GREC is used to diagnose, prevent and treat

proliferative disorders (actinic keratosis, arteriosclerosis, cirrhosis,

thepatitis and cancer; leukaemia, adenocarchoma, lymphoma, melanoma and myeloma)

cropical disorders (epilepsy, stroke, Alzheimer's, Huntington's,

parkinson's disease, multiple sclerosis, dementia and other central

cropical disorders; cardiovascular disorders (angine pectoris,

thypertension, atherosclerosis, conqestive heart failure);

dastrointestinal disorders (dysphagia, peptic oesophagitis, oesophageal

cropical agastric carcofinoma, anorexia, abdominal angina,

pyrosis, pancreatitis, crohn's disease, diarrhoea); autoimmune/

inflammatory disorders (acquired immunodeficiency syndrome (AIDS),

chilammatory disorders (acquired immunodeficiency syndrome (AIDS),

dermatitis, glomerulonephritis, drave's disease, osteoarthritis,

contrastic, protozoal and helmithic infections) and metabolic disorders

changes and and helmithic infections) and metabolic disorders

                                                                                   AAW86323;
                                                                        ö
                                The invention provides a seven times membrane-penetrating type receptor protein ERG5. The ERG5 (ET-related gene) protein can be expressed by standard recombinant methodology. The protein is used for the detection of cancer cell. The present sequence represents a mouse ERG5 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to G protein-coupled receptors (GPCRs) for which the endogenous ligand has been identified. Non-endogenous constitutively activated versions of known GPCRs are used in the invention for the direct identification of candidate compounds as receptor agonists, inverse agonists or partial agonists. Such asyonists are useful as therapeutic agents for diseases or disorders essociated with GPCRs. The present sequence is a non-endogenous version of a known human GPCR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Identifying agonists of G protein-coupled receptors (GPCRs) for use in disease treatment, comprises contacting candidate compounds with versions of GPCRs -

The present sequence represents a kidney injury associated molecule
(KIM) protein. KIM proteins can be administered therapeutically
by expressing KIM encoding polynuclecitides, to promote growth and/or
survival of damaged tissue (e.g. renal tissue), since the KIM proteins
KIM fusion proteins, conjugates, antibodies and vectors can also be used
therapeutically, e.g. these or the KIM proteins may be included with an
acceptable carrier in pharmaceutical compositions, useful for therapy/
prophylaxis of conditions associated with disfunction/disregulation of
KIM genes or proteins, especially renal diseases or impairments of renal
prophylaxis of conditions associated with disfunction/disregulation of
KIM genes or proteins, especially renal diseases or impairments of renal
cunction in humans (e.g. acute renal failure, acute nephritis). The
polynucleotides can be used to produce antisense sequences which, when
internalised into cells, can disrupt expression of a cellular KIM gene,
also useful in therapy (e.g. to block the growth of tumours dependent on
KIM for growth) or compositions. The proteins and polynucleotides are
useful diagnostically e.g. to detect and quantify renal injury/disease
(indicative of increased risk, or presence of, renal injury or impaired
tissue growth arising from/affecting renal tissue). The proteins can
also be used to locate KIM-producing cells (especially specific loci,
e.g. tissue masses abnormally producing/expressing KIM such as tumours
arising from/affecting renal tissue), by contacting cells with an
imageable KIM-binding reagent and imaging reagent accumulation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

The present invention describes a number of peptides which disrupt the G2 cell cycle checkpoint when administered to a cell. They act by inhibiting Chk1 and Chk2 kinases, and may be derived from Cdc25C. The peptides, an example of which is shown here, are useful in the treatment of cell proliferation diseases, such as cancer, as the inhibition of the Chks allows DNA damage and induces apoptosis.
                                                                                                                                                                                                                                                                                                                                                                                                             Isolated or recombinant polypeptide of 7-11 amino acids, useful for treating cell proliferative disorders, e.g. to stop the growth of, or kill cancer cells, by disrupting the G2 cell cycle arrest checkpoint
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; Cdc25C; Chk1; Chk2; G2 checkpoint; cell cycle regulation;
cancer; cell proliferation; apoptosis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          2 Peptides (AAW13834 and AAW13835) comprise the N-terminal sequences of Fit4/IgG proteins obtd. from 293 cells expressing the Fit4 receptor tyrosine kinase. The first peptide, corresponding to 150 and 70 kDa protein bands, matches the Fit4 sequence starting at residue 25. The second peptide, from a 80 kDa band, matches the Fit4 sequence beginning at residue 473. The Fit4/IgG appeared to be phosphorylated in the extracellular domain. Novel human VRP of Fit4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

                                                                                                      8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           용
                                                                                                                                                                                                                      ö
                                                                          The present invention describes a number of peptides which disrupt the G2 cell cycle checkpoint when administered to a cell. They act by inhibiting ChX1 and ChX2 Kinases, and may be derived from Cdc25c. The peptides, an example of which is shown here, are useful in the treatment of cell proliferation diseases, such as cancer, as the inhibition of the ChXs allows DNA damage and induces apoptosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes a number of peptides which disrupt the G2 cell cycle checkpoint when administered to a cell. They act by inhibiting ChK1 and ChK2 Kinases, and may be derived from Cdc25C. The peptides, an example of which is shown here, are useful in the treatment of cell proliferation diseases, such as cancer, as the inhibition of the Chks allows DNA damage and induces apoptosis.
Isolated or recombinant polypeptide of 7-11 amino acids, useful for treating cell proliferative disorders, e.g. to stop the growth of, or kill cancer cells, by disrupting the G2 cell cycle arrest checkpoint -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Isolated or recombinant polypeptide of 7-11 amino acids, useful for treating cell proliferative disorders, e.g. to stop the growth of, or kill cancer cells, by disrupting the G2 cell cycle arrest checkpoint

The present invention describes a number of peptides which disrupt the G2 cell cycle checkpoint when administered to a cell. They act by inhibiting Chk1 and Chk2 kinases, and may be derived from Cdc25c. The peptides, an example of which is shown here, are useful in the treatment of cell proliferation diseases, such as cancer, as the inhibition of the Chks allows DNA damage and induces apoptosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human brain expressed single exon probe encoded protein SEQ ID NO: 30402.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Isolated or recombinant polypeptide of 7-11 amino acids, useful for treating cell proliferative disorders, e.g. to stop the growth of, or kill cancer cells, by disrupting the G2 cell cycle arrest checkpoint
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; brain expressed exon; gene expression analysis; probe;

buman secreted proteins encoded by the genes AAC59335-C59382. The genes buman secreted proteins encoded by the genes AAC59335-C59382. The genes and proteins are useful for preventing, ameliorating or treating medical conditions, e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (antiagonists are useful in the nucleic diagnosis, treatment and prevention of: (a) cencer, e.g. breast and ovarian cancer, and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune thyroiditis, diabetes mellitus, conitis, (c) carddovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infections.
                                                                                                                                                       Human secreted proteins and the nucleic acids that encode them, useful in gene therapy protocols and recombinant nucleic acid based procedures
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; bone marrow expressed exon; gene expression analysis; probe; microarray; cancer; leukaemia; lymphoma; myeloma.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cencers. The present sequence is a protein encoded by one of

                                                                                                                                                                                                                                                               ö
                                                                                 The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is a protein encoded by one of the probes of the invention.

The present invention relates to compositions and methods for the detection, diagnosis and therapy of haematological malignancies. The present sequence is the protein sequence of a human haematological malignancy related antigen. The methods of the present invention comprise detecting the presence of haematological malignancy related antigen(s) in sample obtained from the patient (an increased level of the polypeptide, compared to an unaffected individual, is indicative of an increased risk). Haematological malignancies which can be treated using follicular lymphoma, Hodgkin's lymphoma, non-Hodgkin's lymphoma, and T/B cell non-Hodgkin's lymphoma and T/B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

Nucleic acids encoding 3224 human nervous system antigen polypeptides, useful for preventing, diagnosing and/or treating nervous system cancers and metastases

Claim 11; SEQ ID NO 6528; 1701pp + Sequence Listing; English.

The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases such as viral, bacterial, fungal and parasitic infections diseases such as viral, bacterial, fungal and parasitic infections.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.Wipo.int/pub/published\_pct\_sequences.

The present sequence is the protein sequence of a human haematological malignancy related antigen. The methods of the present invention comprise detecting the presence of haematological malignancy related antigen(s) in a sample obtained from the patient (an increased level of the polypeptide, compared to an unaffected individual, is indicative of an increased risk). Haematological malignancies which can be treated using the present invention are chronic lymphocytic leukaemia, lymphoma,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          follicular lymphoma, Hodgkin's lymphoma, non-Hodgkin's lymphoma and T/B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            malignancies, e.g. chronic lymphocytic leukemia, lymphoma, follicular lymphoma and Hodgkin's and T/B cell non-Hodgkin's lymphoma

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to compositions and methods for the detection, diagnosis and therapy of haematological malignancies. The present sequence is the protein sequence of a human haematological malignancy related antigen. The methods of the present invention comprise detecting the presence of haematological malignancy related antigen(s) in a sample obtained from the patient (an increased level of the polypeptide, compared to an unaffected individual, is indicative of an increased risk). Haematological malignancies which can be treated using the present invention are chronic lymphocytic leukaemia, lymphoma, follicular lymphoma, Hodgkin's lymphoma, non-Hodgkin's lymphoma and T/B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  follicular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to compositions and methods for the detection, diagnosis and therapy of haematological malignancies. The present sequence is the protein sequence of a human haematological malignancy related antigen. The methods of the present invention comprise detecting the presence of haematological malignancy related antigen(s) in a sample obtained from the patient (an increased level of the polypeptide, compared to an unaffected individual, is indicative of an increased risk). Haematological malignancies which can be treated using the present invention are chronic lymphocytic leukaemia, lymphoma, follicular lymphoma, non-Hodgkin's lymphoma and T/B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Compositions and methods for the detection of hematological malignancies, e.g. chronic lymphocytic leukemia, lymphoma, follicular lymphoma and Hodgkin's and T/B cell non-Hodgkin's lymphoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

                                                                                                                                                                                                                                               detection, diagnosis and therapy of haematological malignancies. The present sequence is the protein sequence of a human haematological malignancy related antigen. The methods of the present invention comprise detecting the presence of haematological malignancy related antigen(s) in a sample obtained from the patient (an increased level of the polypeptide, compared to an unaffected individual, is indicative of an increased risk), Haematological malignancies which can be treated using the present invention are chronic lymphocytic leukaemia, lymphoma, follicular lymphoma, Hodgkin's lymphoma, non-Hodgkin's lymphoma and T/B cell non-Hodgkin's lymphoma
Compositions and methods for the detection of hematological malignancies, e.g. chronic lymphocytic leukemia, lymphoma, follicular lymphoma and Hodgkin's and T/B cell non-Hodgkin's lymphoma -

Recombinant or substantially pure preparations of H. pylori polypeptides are disclosed, together with the nucleic acids encoding them. In all, 97 ORFs are shown. The proteins are variously cell envelope proteins, cytoplasmic proteins, secreted proteins or other cellular proteins. Vaccines containing the nucleic acids or proteins are claimed, as are probes containing at least 8 nucleotides from the nucleic acid sequences. The vaccines are useful for treating or reducing the risk of H. pylori infections, and the probes can be used diagnostically for altereting the presence of Halicobbacter in a sample. The products are also of use in screening for compounds having the ability to interfere with the H. pylori life cycle or to inhibit H. pylori infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated Helicobacter pylori nucleic acids - used to develop products for the diagnosis, prevention and treatment of infection by H. pylori and other Helicobacter species
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Drosophila; developmental biology; cell signalling; insecticide;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to isolated nucleic acid molecules encoding novel human secreted extracellular matrix proteins (SPs). The novel human secreted extracellular matrix proteins (SPs). The polynuclectides and proteins are used to prevent, treat a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. For example, disorders associated with decreased expression of SPs. The SP polynuclectide or a vector expressing them may be administered to drawn regulate expression of SPs by binding with the cells own genes and preventing their expression. The polynuclectides may also be used as antiqens to produce antibodies and to identify modulators (agonists and antagonists) of the SPs. The anti-(SP) antibodies and antagonists and antagonists of the SPs. The anti-(SP) antibodies and antagonists and antagonists of the SPs. The anti-(SP) antibodies and antagonists and altagnostic agents for detecting the presence of SPs in samples. The disorders include for example: immune/autoimmune diseases (e.g. HIV (human immunodeficiency virus) infections, anaemia, rheumatoid arthritis and multiple sclerosis), cancers and hyperproliferative disorders (e.g. canchars, adisease), neurological diseases (e.g. Alzheimer's disease, cand fungi and ocular disorders (e.g. corneal infections). Other uses include wound healing, maintenance of organs before transplantation,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                   The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                vulnerary; antipooriatic; antiparkinsonian; notropic; neuroprotective; anticorvulsant; osteopathic; antiarthritic; immunosuppressant; cardiant; immunosimulant; thrombolytic; coaqulant; vasotropic; antidiabetic; hypotensive; dermatological; immunosuppressive; antidialmatory; antidiantatory; antidiantatory; antidiamatory; antidiamators; antidiamators; antidiamatory; appetential; antidiamators; infection; severe combined immunodeficiency; antidiamators; infection; allergy; aplastic anaemia; nocturnal haemoglobinuia; burn; wound;
                                                                                                                                                                                                                                                                                                                          The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                          New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               bone damage; cartilage damage; antiinflammatory disease; coagulation; thrombosis; contraceptive.

The sequences can be used for determining the presence of or predisposition to, or preventing or treating pathological conditions associated with an ORFX associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritis, graft vs host disease, candiovascular disease, diabetes mellitus, hypertension, hypothyroidism, cholesterol ester storage, systemic lupus crythematosus, severe combined immunodeficiency (SCID), AIDS, viral, bacterial or fungal infection, malaria, autoimmune disorders, asthma, allergies, aplastic anaemia, burns, wounds, bone and cartilage damage, competural hemoglobinuria, antiinflammatory disease; to enhance
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Anti-HIV; antianemic; antirheumatic; artiscircotic; cardiant; vascular; cerebroprotective; thrombolytic; antimicrobial; ophthalmic; cytostatic; antialzheimers; immuned/autoimmune disease; HIV infection; anaemia; human immunodeficiency virus; rheumatoid arthritis; multiple sclerosis; scancers; hyperproliferative disorder; breast neoplasm; melanoma; Sezary syndrome; Gaucher's disease; neurological diseases; Alzheimer's disease; parkinson's disease; cardiac arrest; tachycardia; angina; infection; corneal infections; wound healing; immunogen; gene therapy; antisense; food additive.
                                                                                                                                                                                                                                                                                                                                                 AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              4-SEP-2
   The invention relates to isolated nucleic acid molecules encoding novel human secreted extracellular matrix proteins (SPS). The novel human secreted extracellular matrix proteins (SPS). The polynucleotides and proteins are used to prevent, treat a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. For example, disorders associated with decreased chickens or sheep. For example, disorders associated with decreased condition of SPS. The SP polynucleotide or a vector expressing them may be administered to treat diseases by gene therapy. Antisense molecules may be administered to down regulate expression of SPS my binding with the cells own genes and preventing their expression. The polynucleotides may also be used as DNA probes in diagnostic assays. The SPS may also be used as antigens to produce antibodies and to identify modulators (agonists and antagonists) of the SPS. The anti-(SP) antibodies and antagonists may also be used to down regulate expression and activity of SP and as diagnostic agents for detecting the presence of SPS in samples. The disorders include for example: immune/autoimmune diseases (e.g. HIV (human immunodeficiency virus) infections, anaemia, rheumatoid arthritis and multiple sclerosis), cancers and hyperproliferative disorders (e.g. cardiac Gaucher's disease), neurological diseases (e.g. Alzheimer's disease, cardiac Aisease) actdiac/cerebrovascular disorders (e.g. cardiac arrest, tachycardia and angina), infections caused by bacteria, viruses and fungi and ocular disorders (e.g. corneal infections). Other uses include wound healing, maintenance of organs before transplantation,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a pathological condition. Antibodies to the proteins can also be used in alleviating symptoms associated with the disorders and in diagnostic immunoassays e.g. radioimmunoassays or enzyme linked immunosorbant assays (ELISA). Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. neoplasms of the breast or liver, earliovascular disorders e.g. cardiac arrest, cerebral ischaemia, anglogenesis, nerous system disorders e.g. Alzheimer's disease, infections caused by bacteria, viruses and fungi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         nseq
                                                                                                                                                                                                                                                     The invention relates to isolated nucleic acid molecules and their encoded secreted proteins. The nucleic acids and proteins are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          disorders listed in the specification. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be use a food additive or preservative to increase or decrease storage capabilities, fat content, lipid, protein, carbohydrate, vitamins, minerals, cofactors and other nutritional components. The present sequence represents a novel secreted protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
